

## MACOMB FEEDING THE NEED

*"To feed the needs of the community, mind, body, spirit and soul".*

### HOUSE BILL 4017-MARCH 11, 2015-10:30am

#### HOW TO INSURE SAFETY

All food donated should be prepared by a Serv Safe certified kitchen. Thus ensure that all food is being prepared in a safe time and temperature. All food should be transported safely in temperature-controlled containers. As well as being either cooked or refrigerated or frozen within 6 hours, so it can be distributed safely.

#### WHY THE NEED

At MACOMB FEEDING THE NEED (A COMMUNITY KITCHEN), we feed anywhere from 60 to 300 individuals in a single feeding!! Most of the clientele come in for a continental breakfast, a hot lunch and a bagged lunch to go. For many of the people coming it's the only nutritious meals they receive all week long. We serve well-balanced meals, with lots of fresh vegetables, and starches, and protein. But we are struggling to keep offering the protein they need. Restraints and groceries don't donate their meats and dairy because they are afraid of being sued. Instead they throw them out, one chain actually throws lye on their meat so no one can use it. This meat is labeled SELL-BY (There is nothing wrong with it) and on that date they toss that food in a dumpster and lye is thrown on it. That meat is still good and could be prepared up in our kitchen by certified Chefs to feed the community. Or prepared and frozen to be given to others in need. The same goes for Milk, Butter and Cheese, important proteins that are still good if used immediately or frozen (which we do).

We serve the Macomb County poor, the Homeless, the near homeless with small children and the elderly. We have seen an increase in elderly and children. Protein is an important and vital part of their diet. We are asking you to pass this bill to ensure that we are able to continue to feed the needy with the help of these business owners without them worrying about the repercussions of being punished for doing so. No one should have to worry about being sued for feeding the needy for free.

#### A FEW FACTS AS TO WHY IT'S NEEDED

The rate of young children in the county qualifying for food assistance increased 83 percent, compared to a statewide rise of 55 percent.

"The number of children eligible for food assistance doubled to include 17,000 children," Zehnder-Merrell said. "At the same time, the number of children who qualified for free and reduced cost lunch jumped from 22,000 to 32,000. That's a pretty significant increase."

in need safely.

All food being donated should be prepared by a ServSafe certified kitchen. This ensures that all food will be prepared in a safe time and temperature manner. All food will be cooked or frozen within 24 hours, so can be distributed to people

## INSURE SAFETY

Source: Feeding America with the generous contribution from The ConAgra Foundation, The Nellison Company and the Howard G. Buffet Foundation

Children comprise 22.3 percent of the food insecure population.

Over 1.6 million citizens of the State of Michigan alone go hungry. This is above the national average of 15.9 percent.

16.8% of the state population are "food insecure people" not knowing where their next meal is coming from or when.

## PEOPLE IN NEED

Food rotting in landfills contributes to global warming. When food decomposes it releases methane, a greenhouse gas 21 times more damaging than carbon dioxide. Wet food waste is the main threat to groundwater or stream pollution.

Type of food filling our landfills: perfectly good produce, dairy, meat and bakery items. Wasting food uses time, energy, and resources-both money and oil.

the Rose Bowl every three days. Nationwide, food scraps make up 17 percent of what we send to landfills.

products in America is not eaten. That amounts to more than 29 million tons of food waste each year, or enough to fill

According to research by a former University of Arizona anthropologist, Timothy Jones reveals that 40% of all food

## Overall Food Insecurity Rates

Hunger exists in every corner of the United States, but as Feeding America's Map the Meal Gap study shows, food insecurity looks different from one county to the next. In addition to providing data about the prevalence of food insecurity at the local level, Map the Meal Gap estimates the share of food insecure individuals who are income-eligible for federal anti-hunger programs and provides local variations in food costs. The study finds that many food insecure individuals do not qualify for federal nutrition programs and must rely on charitable food assistance, suggesting that complementary programs and strategies are necessary to reach food insecure individuals at different income levels. By providing information about hunger at the local level, Map the Meal Gap can help policymakers and service providers identify strategies to best reach those in need of assistance.

What is child food insecurity and what does it look like in America?

## Shopping for Change

# Reducing and Recovering Surplus Food

The Massachusetts Department of Environmental Protection and the Massachusetts Food Association partnered to increase organics recycling at supermarkets in their state. Those two organizations established a voluntary program to promote recycling and reusing food waste and other materials. Participating supermarkets save money and receive both positive recognition and waste load inspection regulatory relief. In August 2005, 62 supermarkets, nine haulers, and six composting facilities achieved a 60 to 75 percent recycling rate of food scraps and other organics. The supermarkets reportedly saved \$3,000 to \$20,000 annually per store by simply diverting organics.

Answers your food waste Take a quick look at the following food you are throwing away and identify potential food recovery opportunities to decrease the amount you generate.

Conduct a food waste audit. For more detailed information, track and collect data on the types and amounts of each food waste item you are generating. Collecting these data will help you determine if some of your food waste can be reduced by ordering or producing less, how much could be sent to food banks or shelters, and how much could be recycled through animal feeding, rendering, or composting.

## A Lesson in Successful Partnerships

The San Francisco Recycling Program (SFRP) used stakeholder involvement to create a successful composting program at local schools. SFRP and Sunset Scavenger, a division of NorCal Waste Systems, met with interested teachers, principals, subcontractors, and custodial staff to discuss roles and responsibilities during the different steps in the composting process. Stakeholder meetings allowed SFRP to identify and solve potential problems and foster a sense of responsibility needed to sustain its programs. SFRP's stakeholder involvement also led to student and parent interest in food waste recovery. In 2000, the four public elementary schools and one private high school participating in the program diverted nearly 200 pounds of food scraps daily. The City of San Francisco uses its successful partnership approach to expand its food diversion program to haulers, composting facilities, dairy farmers, local colleges, and other organizations.

**Surplus food can be beneficially used in a variety of ways. The food recovery hierarchy prioritizes methods of reducing food waste.**

### Source Reduction — Reduce the volume of food waste generated

Assess your food waste. Take a quick look at the following food you are throwing away and identify potential food recovery opportunities to decrease the amount you generate.

Conduct a food waste audit. For more detailed information, track and collect data on the types and amounts of each food waste item you are generating. Collecting these data will help you determine if some of your food waste can be reduced by ordering or producing less, how much could be sent to food banks or shelters, and how much could be recycled through animal feeding, rendering, or composting.

### Feed Hungry People — Donate extra food to food banks, soup kitchens, and shelters

Answers your food waste Take a quick look at the following food you are throwing away and identify potential food recovery opportunities to decrease the amount you generate.

Conduct a food waste audit. For more detailed information, track and collect data on the types and amounts of each food waste item you are generating. Collecting these data will help you determine if some of your food waste can be reduced by ordering or producing less, how much could be sent to food banks or shelters, and how much could be recycled through animal feeding, rendering, or composting.

### Feed Animals — Divert food scraps to animal feed

Answers your food waste Take a quick look at the following food you are throwing away and identify potential food recovery opportunities to decrease the amount you generate.

Conduct a food waste audit. For more detailed information, track and collect data on the types and amounts of each food waste item you are generating. Collecting these data will help you determine if some of your food waste can be reduced by ordering or producing less, how much could be sent to food banks or shelters, and how much could be recycled through animal feeding, rendering, or composting.

### Industrial Uses — Provide waste oils for heating and fuel conversion; and food scraps for digestion to recover energy

Answers your food waste Take a quick look at the following food you are throwing away and identify potential food recovery opportunities to decrease the amount you generate.

Conduct a food waste audit. For more detailed information, track and collect data on the types and amounts of each food waste item you are generating. Collecting these data will help you determine if some of your food waste can be reduced by ordering or producing less, how much could be sent to food banks or shelters, and how much could be recycled through animal feeding, rendering, or composting.

### Composting — Create a nutrient-rich soil amendment

## Hungry for the Basic Facts

### Source Production: Use Your Waste Audit to Identify

ways to decrease the amount of food waste you generate. Are there any trends in the types and amounts of food waste you produce? If so, consider changing your business operation to buy only what you use.

Federal People: You can donate unsold or excess food products that meet quality and safety standards to food banks. Many national and local food recovery programs offer free pickups and containers. The Bill Emerson Good Samaritan Food Donation Act (Public Law 104-210) protects food donators from legal liability. The text for this act is available through the U.S. Department of Agriculture's website at: [www.usda.gov/news/pubs/good\\_samaritan/appc.htm](http://www.usda.gov/news/pubs/good_samaritan/appc.htm).

Farm Animals: Determine if local farmers or zoos use food scraps as animal feed. There are laws and regulations protecting animals from contracting diseases through consumption of food scraps. Contact your county agricultural extension office, your state veterinarian, or your county health department to find out about specific state regulations and contact information for licensed farmers. You also might find companies that convert food scraps into animal food products.

Industrial Uses: Renderings: Fat, oil, and grease can be rendered into a raw material to make biodiesel, soap, and cosmetics. Anaerobic digestion of food scraps and waste oils produces biogas that can generate heat and electricity, fiber that can be used as a nutrient-rich soil conditioner, and liquor that can be used for fertilizer.

Composting: Food scraps can be composted. Ask the composting facility you plan to use for a list of acceptable materials and hauling options. Another option is to compost on site. Before beginning such an operation, be sure you have adequate space, staff, and users, and support and cooperation from business or residential neighbors. Contact your local or state environmental agency to find out more about composting options in your area and more information on special issues that apply. Learn more about the science and technology of composting—including various methods—at <http://www.epa.gov/waste/conserve/mrr/composting/science.htm>.

# Putting Surplus Food To Good Use

Every day, food service providers, such as supermarkets, hospitals, universities, restaurants, and food preparation companies, make decisions about what to do with surplus or leftover food. This surplus food, also known as food scraps, food waste, or organic materials, includes all prepared foods, produce, bakery and dairy items, and meat. There are many ways food service providers can improve the environment and provide benefits to communities by reducing, reusing, and recycling uneaten or unused food rather than throwing it away. This guide helps food service providers start a food waste reduction and recovery program at their facilities.

## To Recover or Not to Recover: Why Do It?

Separating and managing your excess food can result in both economic and environmental benefits.

### Economics: It Pays to Reduce and Recover Food Resources

Reducing and recovering excess food may save you money by:

- Decreasing disposal fees. Food banks and renderers often provide free pick-ups for excess food, and composting fees can be less than landfill/incineration tipping fees.
- Decreasing sewer treatment and electricity costs since food waste is not going down the drain.
- Decreasing purchasing costs because you are only buying what is needed.
- Increasing tax deductions for food donations to charities.
- Increasing revenue from selling compost made from food scraps.

### Environment: Saving Resources And Reducing Waste

Putting surplus food to good use benefits the environment by:

- Creating a nutrient-rich soil amendment when composted, which improves overall soil health.
- Eliminating potential dumpster fires such as odors, pests, and fires.
- Conserving landfill space and decreasing methane and other greenhouse gas emissions from landfills.
- Decreasing the volume of waste managed at incinerators, which reduces air emissions and the volume of incinerator ash that needs to be landfilled.
